

SIMULATOR RELOCATION

COMPRO provides an experienced simulation relocation team that has a proven, successful track record in relocating simulators for commercial and government agencies, both in the U.S. and internationally. In addition, the COMPRO team can safeguard all information, comply with security regulations, and meet any other requirements you may have for relocation services.

When you want to lower the risk associated with transferring complex equipment or where time is of the essence, turn to COMPRO!

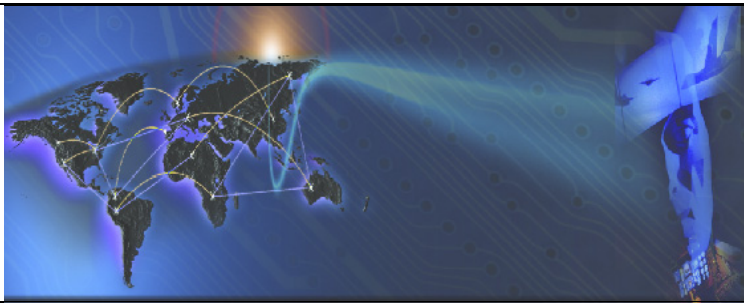

Relocation Services

Depending on your site's requirements, COMPRO's relocation services include:

- Creating the relocation plan, which can include determining resource, access, and facility requirements; performing site surveys and pre-inspections; identifying potential safety hazards; and developing a detailed project schedule of the activities to be performed.
- Provisioning all skilled, trained and certified personnel, equipment (rigging, cranes, forklifts, dollies, etc.), material, and professional services required to accomplish the relocation activity.
- Dismantling the device; disconnecting electrical and electronic connections/hydraulic hoses/pneumatic lines; inventorying equipment; and preparing/packing the equipment for safe transport.
- Arranging all transport needs for the device. This includes provisioning permits, escorts, and suitable transport to move the equipment as well as providing forklifts, cranes, and any specialized rigging equipment to off load and position the equipment at the new site.

Preparing for a Simulator Move

SIMULATOR RELOCATION (Continued)

- Unpacking and installing the equipment (simulator, electrical/electronic cabinets, computer cabinets, Instructor/Operator Stations, etc.) and electrical/hydraulic/pneumatic connections at the new location.
- Performing OEM standalone tests, baseline checks, and/or Acceptance Test Procedures (ATPs) to ensure that the simulator is functioning to the same standard as prior to the relocation.
- Performing site cleanup and disposing of all waste materials in accordance with local, state and government regulations.
- Ensuring that security access requirements are addressed for all personnel participating in the move. If necessary, this can include providing cleared personnel to oversee the operation.
